Project Design Phase-I
Problem – Solution Fit Template

Date	06-03-2026
Team ID	Srashti Patel
Project Name	Heart Disease Analysis
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- **Understand the existing situation in order to improve it for your target group.**

Problem Solution Fit:-

Define CS, fit into CC

1. CUSTOMER SEGMENT (CS) CS

The primary customers for this solution include:

- Healthcare analysts and hospital management teams
- Doctors and medical researchers studying heart disease patterns
- Public health organizations monitoring cardiovascular risk factors
- Medical students and researchers analyzing healthcare datasets
- Government health departments tracking disease trends

These users require clear and interactive visualization tools to analyze heart disease data and identify risk patterns

6. CUSTOMER CONSTRAINTS CC

Customers may face several constraints:

- Limited technical knowledge in data visualization tools
- Lack of time to analyze complex datasets manually
- Budget limitations for advanced analytics tools
- Difficulty integrating multiple healthcare datasets
- Limited access to real-time healthcare data

5. AVAILABLE SOLUTIONS AS

Current solutions customers use include:

- Excel spreadsheets for manual data analysis
- Basic statistical analysis tools
- Paper reports and traditional healthcare statistics
- Static charts and graphs

Limitations of these solutions:

- Limited visualization capabilities
- Difficult to analyze large datasets
- No interactive exploration of data
- Time-consuming analysis process

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS (J&P) J&P

Customers need to:

- Analyze large datasets related to heart disease patients
- Identify major risk factors such as age, cholesterol, blood pressure, and lifestyle
- Detect patterns and correlations between health indicators and heart disease
- Monitor trends across different demographic groups
- Present healthcare insights visually for decision making

Current problems include:

- Raw healthcare data is complex and difficult to interpret
- Traditional spreadsheet analysis is time-consuming
- Lack of clear visual dashboards for medical insights
- Difficulty identifying risk patterns quickly

9. PROBLEM ROOT CAUSE RC

The root causes behind the problem include:

- Large volumes of healthcare data that are difficult to analyze manually
- Lack of effective visualization tools in traditional healthcare reporting
- Growing complexity of health indicators affecting heart disease
- Need for better decision-support tools in healthcare analysis
- Increasing cases of heart disease requiring deeper data insights

7. BEHAVIOUR BE

Customers currently attempt to solve the problem by:

- Collecting healthcare datasets from hospitals and research sources
- Using spreadsheets or statistical tools to analyze patient data
- Generating reports and charts for presentation
- Studying trends such as age groups, cholesterol levels, and blood pressure
- Sharing findings through presentations or research papers

Customers currently attempt to solve the problem by:

- Collecting healthcare datasets from hospitals

Focus on J&P, tap into BE, understand RC

3. TRIGGERS TR

Customers are triggered to act when:

- Hospitals need data-driven insights for patient risk assessment
- Healthcare researchers need to analyze heart disease trends
- Governments require statistics on cardiovascular diseases
- Medical professionals want interactive dashboards instead of raw datasets
- Increasing heart disease cases require better analysis tools

4. EMOTIONS: BEFORE / AFTER EM

Before using the solution:

- Confused by complex medical datasets
- Frustrated with manual analysis
- Difficulty identifying meaningful insights
- Lack of clarity in healthcare data interpretation

After using the solution:

- Confident in understanding heart disease patterns
- Better decision making using visual dashboards
- Faster analysis of medical data
- Improved ability to communicate insights

10. YOUR SOLUTION SL

The proposed solution is a Tableau-based Heart Disease Analysis Dashboard that:

- Visualizes heart disease data using interactive dashboards
- Identifies risk factors such as age, cholesterol, blood pressure, and lifestyle
- Enables filtering and exploration of patient data
- Displays trends and correlations in an easy-to-understand format
- Supports healthcare professionals in data-driven decision making

The system uses **Tableau Desktop and Tableau Prep** to clean, analyze, and visualize healthcare datasets efficiently.

8. CHANNELS of BEHAVIOUR CH

8.1 ONLINE

- Healthcare research websites
- Medical data repositories (Kaggle, WHO datasets)
- Tableau dashboards and online visualization platforms
- Healthcare analytics forums and research communities

8.2 OFFLINE

- Hospitals and healthcare institutions
- Medical conferences and seminars
- Academic research institutions
- Government health departments
